Subject: Fw: Weekly Report of Federal Facilities & Site Cleanup Branch/Immediate Office for the Week of 03/25/2016

Good afternoon Angeles--

Your Branch Weekly is available for you to view and disseminate.

Hope this helps.

Peter

**WEEKLY REPORT
Region 9
Environmental Protection Agency
Week of March 25, 2016
SFD-8
Superfund Division
Federal Facilities & Site Cleanup Branch/Immediate Office**

Highlight of Past Week

Ex. 5 Deliberative Process (DP)

PGA North: On March 18, the Community Advisory Group (CAG) was given an on-site tour of the newly-expanded Main Treatment System (MTS) at PGA North. The CAG members present expressed their appreciation for the expansion work. In 2015, the MTS was expanded for both perchlorate and TCE treatment

in advance of our planned treatment in the Main Drywells Source Area. The ion exchange capacity (for perchlorate treatment) was increased from 400 to 1300 gpm, an increase of 325% in capacity. For TCE treatment, two 5000-gallon LGAC vessels were added to the treatment train increasing capacity from 850 to 1600 gpm, an increase of 88% capacity. CAG Co-chairman Frank Scott wrote a supportive article about PGA for the local newspaper, West Valley View, published on March 9. Ex. 5 Deliberative Process (DP)

Treasure Island Naval Station (San Francisco, CA): The Navy has issued the Proposed Plan/Draft Remedial Action Plan for non-radiological contaminants at the Site 12 Housing Area. Public comment period is March 21 through April 21 and a public meeting will be held on March 30. The proposed plan covers the cleanup of Dioxins, PAHs, Lead, PCBs, and Petroleum Hydrocarbons in soils and groundwater. The proposed cleanup is intended to achieve unrestricted use of the site. The radiological areas are NOT included in this action, and will be covered by a future Proposed Plan after the removal actions have been completed. As this site is Non-NPL and DTSC lead, EPA has not been involved with the review of the proposed plan. (Contact: NadiaHollan Burke, x2-3187).

Williams AFB: The BCT met in Phoenix last week; the transition from Steam Enhanced Extraction to Enhanced Bioremediation at the ST12 Fuels Spill site was the main topic of discussion. Following the last round of pressurization (steam injection) completed on March 4, all of the wells within the uppermost layer of the treatment zone (Cobble Zone) had measurable levels of LNAPL flowing into them. Terra Therm reports they are now pulling out 2000 lbs of LNAPL per day. This may signal the end of the steam injection phase as they transition to passive recovery, which could be at least 12 weeks of extraction before initiation of sodium sulfate injection for enhanced bioremediation. The weekly progress of 3/14/16 provides a cumulative total of 2,465,486 lbs petroleum hydrocarbons removed, 1,352,433 lbs removed as LNAPL, and 205,850 gallons of reusable fuel recovered. (Contact: Carolyn d'Almaida, x2-3150).

Significant Items for Next Week

Fort Ord: EPA will participate in the March 30 Proposed Plan Public Meeting for the Interim Action Ranges Munitions Response Area. The planned reuse of the 226 acre area includes a pistol range, a small arms firing range, and a 203 acres habitat reserve. Land Use Controls (residential use restriction, munitions recognition and safety training for workers involved in intrusive activities, and construction support by UXO qualified personnel during intrusive activities) is the Army's preferred alternative. The work supporting this Proposed Plan was done by the Fort Ord Reuse Authority (FORA) through the Army-funded privatized cleanup effort, which is overseen by EPA under an AOC with FORA. (Contact: Judy C. Huang, x2-3681).
